

C&R MANUFACTURING, INC. NEWS UPDATE

C&R Manufacturing, Inc. 6790 Martindale Rd., Shawnee, KS 66218
www.c-rmfg.com 913-441-4120

2011 Business Overview

C&R has taken full advantage of the economy by investing in several pieces of highly efficient equipment. "We are constantly embracing ways to improve our operations in order to add value for our customers."

– Ron Wosel,
President

New Equipment: Hurco 5-axis mill

Our fixturing expertise allows us to machine all 6 sides in the same cycle, producing a completely finished part.

A bit about Hurco VMX30U 5-axis CNC mill

Having a true 5-axis machine really helps to differentiate C&R from other shops. It is able to machine on 5 sides of a part in one cycle, with one setup. This saves time and money while adding value to our customers by providing a shorter lead time and a better part. Our fixturing expertise allows us to machine all 6 sides in the same cycle, producing a completely finished part.

Techni Waterjet

The waterjet has really expanded C&R's capabilities. Hardened tool steels, copper, plastic, foam, prototypes are just a few uses of the waterjet. This equipment is a great addition to our shop.

A Techni Waterjet has expanded the capabilities of C&R's shop.

Mori NH5000 Horizontal Mill

Up and running:

The Mori NH5000 Horizontal CNC mill has 10 pallets, and is the ultimate lights out machine tool with a 15 minute setup time on repeat run parts. 12000 rpm and 240 tools make this one of the most versatile, productive machining centers in the Midwest.

"The Mori NH5000 is one of the most versatile, productive machining centers in the Midwest."
